

# PRESCIENT IJG MONEY MARKET FUND A1

## MINIMUM DISCLOSURE DOCUMENT

### INVESTMENT AND RETURN OBJECTIVE

The Fund aims to achieve returns above the benchmark (StFi Call), while minimising the risk of any under-performance. At the time, it aims to maintain capital stability and liquidity. The Fund is Regulation 13 compliant and at least 45% is invested in Namibian assets.

### INVESTMENT PROCESS

The Fund invests in cash and high-quality capital market instruments. The Fund is structured to minimise the risk of not meeting the benchmark. Returns achieved above the benchmark are used in specialist strategies designed to enhance yield further.

### WHO SHOULD INVEST

Investors seeking a liquid, low risk money market offering, with enhanced yields. This Fund is suitable to investors with a short-term investment horizon.

### RISK INDICATOR DEFINITION

These portfolios have no equity exposure, resulting in higher interest yields and stable capital values. These portfolios typically target returns in the region of 1% – 2% above inflation before tax over the long term.

### RISK INDICATOR

## FUND COMMENTARY

In August, interest rate repricing continued locally driven by a more favourable global backdrop for risk.

In a dovish address at the Fed's Jackson Hole conference, Chair Jerome Powell indicated that a policy rate cut is likely at the September Federal Open Market Committee (FOMC) meeting. As anticipated, Powell expressed increased confidence in the inflation outlook while highlighting downside risks in the labour market, noting that any further deterioration would be "unwelcome." The expectation for August is a stronger employment report compared to July. However, even though unemployment increased in August, this was solely due to the expansion of the labour force (i.e. more people who were previously not in the labour force are now entering and seeking jobs), and not because of increased layoffs. Powell emphasized that a disinflationary process, while maintaining labour market strength, is only possible with anchored inflation expectations which reflect the public's confidence that the central bank will achieve 2% inflation over time. The market has adjusted to anticipate further interest rate cuts in both the United States (US) and South Africa (SA). Both anticipated to start at the September meetings.

The 12-month NCD rate and 3-month Jibar rate rallied close to 32bps and 5bps respectively. Forward rate agreements (FRAs) repriced lower, with slightly more cuts expected compared to July. Close to five and half rate cuts are priced in over the next 12 months, although not much further reduction is expected out to the two-year point in the FRA curve.

The Fund delivered a strong performance in July, bolstered by positive yielding assets which contributed to the month's return.

### Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs.
